RollupOS — Multi-User Android Mini-App Hub

Google Identity Auth • Dynamic On-Phone Admin Switchboard • Per-User Isolated Storage • Multi-Team ESPN Fantasy Manager

1. Executive Overview & Multi-Tenant Architecture

RollupOS solves "90-app clutter" by installing a single Android WebAPK Super-App shell that dynamically loads authorized mini-apps, enforces per-user Google authentication, and isolates every user's data and API keys into strict namespaces (`rollup::v1::u::<email>::app::<app-id>::*`).

Architectural Layer	File / Component	Multi-User & Security Role
1. Mobile Launcher & Admin Switchboard	`index.html` , `manifest.json` , `sw.js`	Handles Google Sign-In, renders only the mini-apps authorized for the signed-in email, provides the 👑 **Admin Mode** permission matrix, and includes 1-tap 👁️ **Preview as User** testing.
2. Multi-Tenant Bridge SDK	`bridge/rollup-bridge.js`	Injected into every mini-app. Provides `RollupBridge.auth` , isolated per-user storage (`RollupBridge.storage`), per-user app config (`RollupBridge.user`), Phone Secret Vault (`RollupBridge.vault`), Camera, and File Export.
3. Flagship Mini-App: The League Pro	`apps/fantasy-manager/index.html` `data/league_945552.json`	Multi-user ESPN Fantasy Manager synced with all 12 teams in *Weekend Warriors (#945552)*. Each user selects their own team, toggles their own Protected Core players, stars Free Agents to their private Watchlist, and simulates roster moves in their own isolated sandbox.
4. CLI & GitHub Cloud Publisher	`rollup.py`	One-command local server (`serve`), live 12-team ESPN sync (`sync-fantasy`), new mini-app scaffolding (`create`), user authorization (`authorize`), and GitHub deployment (`publish`).

2. Live Weekend Warriors (#945552) — All 12 Teams Loaded

The live ESPN v3 sync engine (`scripts/build_multi_team_fantasy_data.py`) pre-computes 60/40 Blended Moneyball + Consensus VORP, Bench Floor Anchors, and Multi-Horizon Opponent Counter-Pick War Rooms for all 12 franchises:

Team ID	Franchise Name	Record	Default Profile Behavior
#4	**Mahomes Depot**	4-2-0	Default for `andrewnicks@gmail.com` (👑 Admin) with 10 canonical Protected Rockstars.

Team ID	Franchise Name	Record	Default Profile Behavior
#14	America's Team	3-3-0	Pre-configured for `americas.team.tester@gmail.com` (or selectable by any authorized user).
#1	The Questionables	3-3-0	Pre-configured for `questionables.tester@gmail.com` (or selectable by any authorized user).
#2, #3, #5, #6, #9, #10, #11, #12, #13	Dirty 6, Jew Nose, Worthy of a Championship, Woo, Greek Freaks, Club Chubb, Raiders of the Black Hole, Mitch Better Have My Money, Pickens Up Another Trophy	Active	Selectable with 1 tap via the 👥 **Team** button inside *The League Pro* or pre-assignable by Admin.

3. Quick-Start Commands & Testing Workflow

> **Local Hub URL:** `http://localhost:8090`
> **Refresh All 12 Teams from ESPN Live API:** `python rollup.py sync-fantasy`
> **Create a New Mini-App:** `python rollup.py create my-tool --title "My Tool"`
> **Publish to GitHub for Remote Mobile Sync:** `python rollup.py publish`
